A good boat better

Walker Bay's High Impact Marine Composite (HIMC) dinghies with their superb sailing rigs have long been a favorite of ours, and now they have introduced a new line of RIBs and inflatables with their Genesis and Odyssey boats. The Genesis has a removable flotation tube to allow easy repair or replacement by a dealer, with all the attendant advantages, coupled

with trim tabs and a V-lift recess in the stern that allows for quicker planning and speeds of 25 knots. Integrated wheels in the stern make for easy launching.

The Odyssey is a more conventional-appearing inflatable, with a removable floor of wood slats or a high-pressure air floor, depending on the model. Odyssey sizes run from seven feet, 11 inches to 11 feet, two inches and the Genesis ranges from eight feet, 10 inches to 11 feet, two inches overall. Inflatable tubes are available in either Hypalon or PVC. Contact Walker Bay at 888-449-2553.
