

WALKER BAY

When it was introduced in 2006, Walker Bay's Genesis RIB, the world's first injection molded RIB, won the NMMA's Innovation Award. And the boats were as popular with customers as they were with the experts. But boaters had one request: they wanted a center console option. The Console 340 FTD, 310 FTD and 310 FTL are Walker Bay's answer.

These models combine the Genesis High Impact Marine Composite (HIMC) hull with a fully integrated injection molded center console unit. Together, they make for a versatile and affordable small RIB that's high on performance and comfort.

Designed to maximize space, the Genesis RIB has a wider bow area and more overall internal space than any other RIB its size. Interior space is maximized further with the custom-designed HIMC injection molded console. The center console has two compartments, one designed to take a battery and the other for gear. The driver's seat on the deluxe model has an integrated, hinged backrest and lifts to reveal two storage trays for small items, which can be removed

to access two larger water resistant storage compartments underneath, one of which has a secure ventilated area designed to hold a six-gallon gas tank in place.

The V-hull design features dynamic hull channels, integrated trim tabs and a V-lift recess in the stern keel. Together, they improve water flow while optimizing planing performance and maneuverability at high speeds. The proprietary HIMC hull ensures a smooth solid ride that absorbs vibration and cuts easily through rough chop. With the addition of integrated remote steering, the horsepower rating for the Genesis 340 is increased to 30 hp and the 310 is increased to 20 hp.

For the Genesis Console, Walker Bay has designed the innovative Quick-Clip system that locks the console into a designated place without any drilling. The top part of the console tilts for easy access during maintenance and provides quick entry to the battery and rear side of the dashboard. In a nice touch, the Genesis Console RIB has slatted flooring, which drains into a bilge, keeping water away from your feet.

And with prices that range between \$3,449 and \$6,197, these versatile vessels are well within reach.
